SIMPLY SUSTAINABLE

DEMILEC

SPRAY FOAM INSULATION

PRODUCT INFORMATION

WHAT: Demilec produces Polyurethane Spray foam insulation: open cell, closed cell and coatings. Spray foam insulation is an energy cost-saving solution, which can offer a sizeable return on insulation investment compared to traditional fiberglass insulation. In addition, spray foam insulation will out-perform traditional fiberglass insulation in every way, and will remain intact and last for the life of the home or building. Spray foam will continue to efficiently insulate, whereas traditional fiberglass sags and settles causing it to no longer perform at its original R-value.

WHERE: Demilec's spray foam insulation and coating products make commercial, industrial, residential, and agricultural buildings more energy efficient

WHY: Demilec's products are developed and created using renewable and recycled materials. Thousands of tons of plastic waste was diverted from landfills and used in development of their products, which provide high R-values and sealing areas to create barriers against outside air, moisture, vapor, and noise pollutants.

ECO-PUR® | PIP

HEATLOK™ SPRAY POLYURETHANE FOAM SOY-200

TECHNICAL SPECIFICATIONS

- Available in open and closed cell products that are eco-friendly and meet the Living Building Challenge Red List
- Adhere to nearly any substrate
- Save on energy costs
- Contain no CFC's, HCFC's, formaldehyde, or fibrous materials
