

PRODUCT INFORMATION

WHAT: Heritage is a line of premium penetrating oil finishes handcrafted in small batches with the highest quality, all natural ingredients from sustainable sources. Heritage Natural Finishes are made *without* the use of toxic heavy metal dryers, chemical processing, petroleum distillates or bleaching. All products are biodegradable, non-ozone depleting, and can be used on heavy timbers, logs, wood planks, cabinets, doors and more.

WHERE: Timbers, logs, tongue & groove, interior solid wood paneling, any wood furniture (not ideal on veneers), wood siding, shingles, trim, windows, doors, cabinets or shelving, counter-tops (wood, concrete, and earth), floors, wood tool handles, fences and fence posts, decks, greenhouse or garden beds, kids wooden play sets or any wooden toys, earthen floors, cob work, concrete, raw, unpolished marble, canvas, and more. Interior and exterior applications. Not intended for heavy commercial uses.

WHY: Originally developed for the unique finishing requirements of large timbers and logs, Heritage Natural Finishes produce a superior, natural and easily repaired finish on any woodwork, enhancing the patina and grain pattern of the species to which it is applied. Because it contains no drying agents of any kind, Heritage Natural Finishes may be left on the wood surfaces for extended times, from a hour to overnight without gumming or hardening, thus greatly enhancing absorption into the wood. Our natural oil finish continues to wick deeper into the fibers, grain, and checks long after the surface is dry.

TECHNICAL SPECIFICATIONS

Original Liquid Finish: Interior or Exterior use.

Exterior Finish: Includes UVA and Mildewcide.

Finishing Oil: A richer mix of oils for hand finishes, especially good for furniture, earthen floors and concrete.

Liquid Wax End Sealer: Non-staining joinery end sealer and end grain sealer for logs and timbers.

Earth Finish: for Earthen floors or Cob work.
